

Family History Turned Family Legacy!

Learn about a research study today

Children aged 5-17 years old who have a history or family history of atopic disease may be able to participate in a research study evaluating an investigational eye drop treatment for eye allergies.

Atopic diseases refer to a group of conditions that are linked by a shared underlying immunoglobulin (IgE) response to allergens that are usually harmless. This group includes:

- Allergic Conjunctivitis (or eye allergies)
- Atopic Dermatitis (or eczema)
- Asthma
- Food & environmental allergies

To qualify to participate your child must:

- Be aged 5-17 years old
- Have a family history of an atopic disease
- Have normal ocular health
- Be in good general health

Turn your family's history into your child's legacy by helping to advance medicine for children just like them!
